Applicant's remarks concerning the restriction requirement have been given careful consideration. It is noted that applicant elected "with traverse" but applicant failed to present reasons for the traversal. Unless applicant subsequently presents reasons for the traversal, the election will be treated as being without traverse.

Claims 23, 24 and 44 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The phrases "a transmission ratio of a lever arm into a multiple of the reaction force applied" (claim 23) and "with a slope smaller than an automatic locking threshold" (claim 23 and claim 44) are vague and indefinite. Regarding claim 24 it is unclear if the "another ball position" (contact of ball with cover) is the same or different from the "third ball position" (contact of ball with nipple) since the ball contacts both the cover and the nipple at the same time.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 23, 24, and 44 are rejected under 35 U.S.C. 103(a) as being unpatentable over Weskamp et al.

Weskamp et al shows a quick-action clamping cylinder having a housing 100, a cover 104, locking balls 102, a spring 138, a piston 106 having a chamfer 108. The balls contact the cover and the nipple when in the locked position. The chamfer for the

Application/Control Number: 10/553,712 Page 3

piston is no more than an obvous matter of design choice. One skilled in the art would recognize that the force that the ball is moved radially inwardly varies with the slope of the chamfer. Hence, to provide a slope commensurate with the force desired would be obvious for one skilled in the art.

Claims 25-43 and 45-46 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to a nonelected invention, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 7/21/08 but gave no reasons for the traversal. The election will be treated as being without traversal if no reasons for the traverse are subsequently presented.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Robert C. Watson whose telephone number is 571 272-4498. The examiner can normally be reached on Mon. - Thurs. , 5:30am - 4:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Joseph J. Hail III can be reached on 571 272-4485. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
